PRICE LIST
 OF
SEEDS

OF
Trees, Shrubs and
Fruits

FOR SALE BY

THOMAS MEEHAN & SONS, Inc.

Nurserymen, Tree Seedsmen and Landscape Engineers.
Germantown, Phila., Pa.

AS WE COLLECT but few more seeds than are ordered, this list is, of course, issued in advance of the season, and there may possibly be some which may fail to mature. To secure a full supply, early orders are solicited.

In some seeds, especially *Quercus* and *Carya*, an egg is deposited by a fly, which cannot be detected until the worm makes the hole in the seed on its exit, and there are often some unsound ones which it is impossible to detect when collecting them. We do our best to collect in places believed to be free from the insect, and to give only sound and perfect seeds. Injuries which may come from these hidden causes are, of course, at the risk of the purchaser. There are some trees, such as the *Liriodendron* and *Acer Saccharinum*, for instance, which never perfect all their seeds; some are always bad, and there is no way to separate the imperfect ones.

Not less than one-quarter pound is furnished at pound rates, nor one-quarter bushel at the bushel rates. Half ounces of any of the seeds may be obtained where the price per ounce is not quoted at less than twenty cents. Satisfactory arrangements for payment must accompany orders from unknown correspondents. When seeds are to go by mail, the charge is eight cents per pound additional. P. O. orders payable at Philadelphia,

GERMINATION OF THE SEED

Most failures with seed arise from not sowing it in **Partial Shade**. In hot bursts of sun come on the seed beds while the seeds are swelling and cold follows, many of them are liable to rot before they appear above the surface. For raising seeds on an extensive scale, many now use artificial arbors, tall enough to work under. For small lots, brushwood, or a thin shade of cornstalks, or a skeleton frame, is an excellent plan. Where birds are destructive, lattice frames are made to cover the beds with. There are many kinds of seeds which, in the hands of experienced cultivators, need no shade, but to all persons of limited knowledge we would recommend to shade every one.

Seeds take some time to swell their coats after going in the ground, hence all should be put in as early as possible—even though the frost be not out of the ground—if any dry soil can be had to cover. Many find advantage in sowing even on frozen soil. In some climates where the springs are early, some seeds will remain in the ground till the following season. If they fail to appear by the time the spring is over, examine, and if found with fresh kernels, keep the beds weeded and shaded till the next season.

These simple directions are all that anyone needs to have tolerable success in raising tree seeds. The greater the experience, of course, the greater the success.

Guarantee.—While we exercise great care to have all seeds pure and reliable, our seeds are sold without any warranty, express or implied, and without any responsibility in respect to the crop, there being too many causes known and unknown which prevent good seeds from germinating. Orders are accepted and shipped on these terms. Should the seeds prove unsatisfactory on receipt, customers will kindly correspond with us immediately in regard to their disposition.

All our seeds are fresh. All are carefully examined before sending. Nothing is sold but what seems, to the best of our knowledge, to be first-class. Anxious to have our customers come to us regularly every year, it is not to our interest to send anything but first-class seeds. What are unsold at the close of the season, we sow ourselves, to keep up our supply of seedlings, hence customers can rely on the fresh quality of what we offer.
